

## **MANN+HUMMEL Picolino**

**Compact air cleaner system for high requirements**

# Picolino: Compact air cleaner for high requirements

The Picolino line from MANN+HUMMEL offers exceptional filtration in a compact installation space with excellent flexibility. The Picolino line is available with a number of different connections to enable it to adapt to different applications.

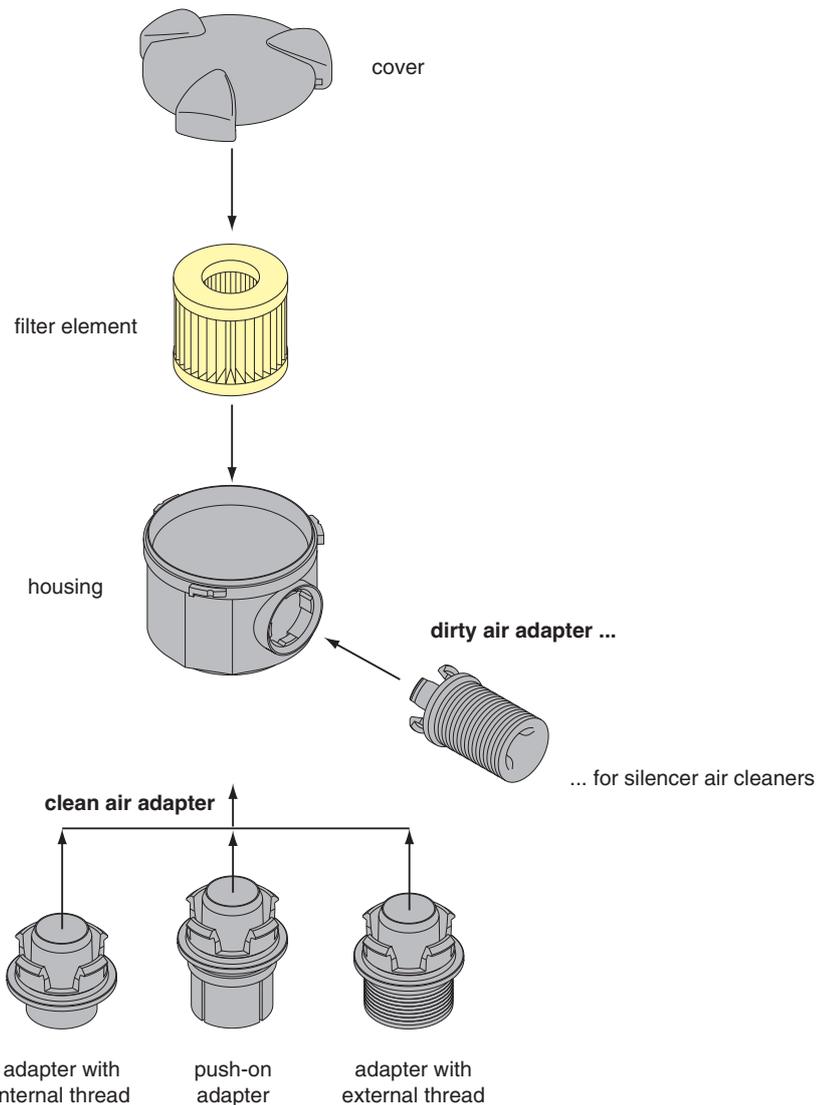

## Advantages at a glance:

- excellent flexibility through variable modular system
- economical air cleaner system through combination of standard parts
- easy element change without tools
- corrosion-free and robust housing through use of plastic reinforced with fibre-glass
- temperature resistant to +130 °C (for short periods)
- material with high temperature stability available for adapters on request
- quick response to customised filtration solutions
- metal-free filter elements are easily disposed of by incineration and therefore are environmentally friendly with inexpensive disposal
- patented filter elements with radial seal

## Picolino modular system

The product line consists of five master housings with various adapter pieces which can be used to adapt the cleaner to the individual requirements of customised applications. The housing, adapters and filter elements are free of metal. Depending on the design, the system covers nominal flow rates from 0.15 m<sup>3</sup>/min to 3.2 m<sup>3</sup>/min.

# Filter elements

- high dust capacity through special MANN+HUMMEL filter medium
- radial seal through elastomer end plates (protected by patents)
- reliable pleat stabilisation prevents pleats sticking together under unfavourable conditions

# Applications

## The right configuration for every application

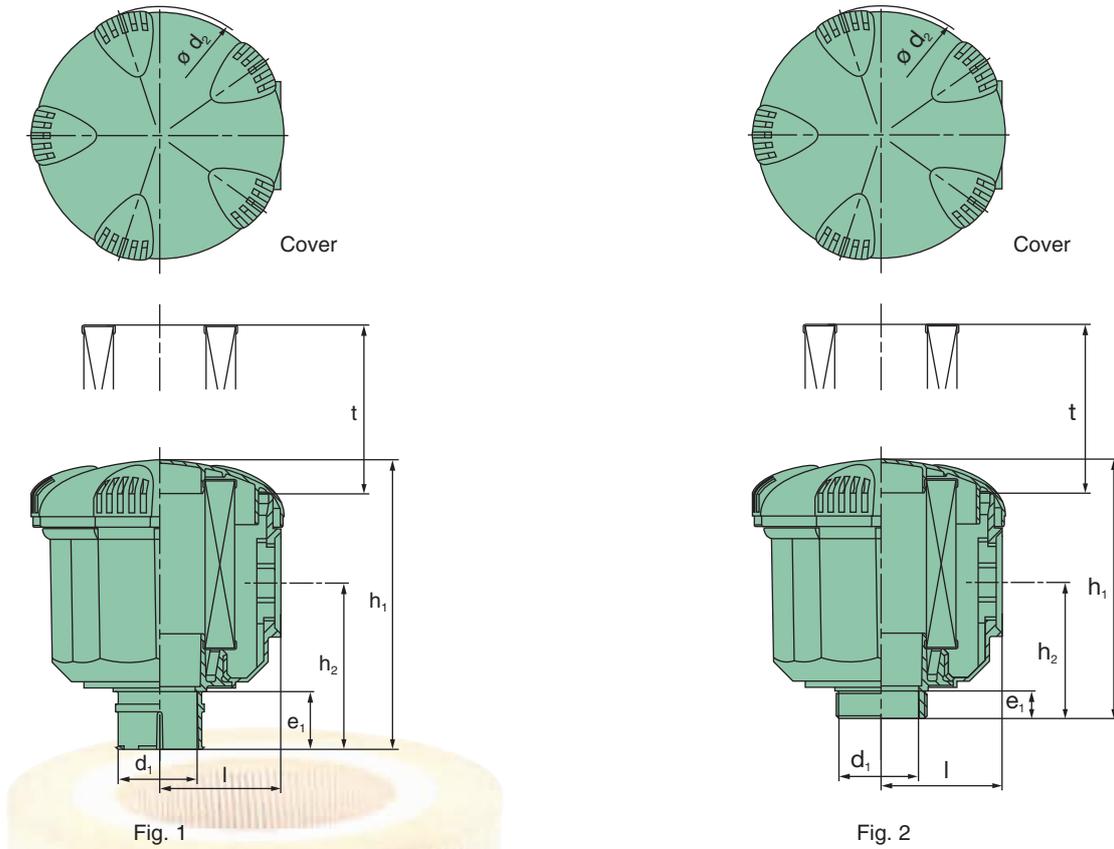

The air cleaners of the Picolino line are available with a number of connection fittings and are, for example, suitable for:

- silencer air cleaners for low-noise air intake, e.g. in small piston compressors
- intake air cleaners for small engines (lawn mowers, power generators, etc.)
- two-way ventilation air cleaners for gear units and tanks for liquids

1) The nominal flow rate relates to a flow resistance of 15 mbar. The flow rate depends on the cross-section of the clean air outlet.
