

Our smallest unit yet, the Compact Offline Filter is able to fit where no other filtration equipment can. Ideal for smaller systems, or where a larger offline system wouldn't fit, can be permanently installed or portable.

Typical applications include gear boxes, plastic injection molding machines, and vacuum pumps, to name a few. Choose between a variety of motors, wands, hoses, and portable cart options. Paired with our unique VTM elements, this unit can remove particulate, water, and varnish all with one filter.

### HY-PRO

### Small size, huge results.

The vertical design allows the installation of equipment with limited space compared to filter panels or other offline filtration equipment. At only 8.5" depth, 8" wide, and 27.75" tall, the COF can be installed on almost any piece of industrial or mobile equipment.

### Wide range of media options.

Choose between a variety of media options from our G8 dualglass (M), G8 dualglass + water-absorbing (A), or VTM media. VTM710 media is the ideal filter media choice to pair with the COF to remove particulate, water, and varnish. Our G8 dualglass media is another excellent option. Rated at an industry-leading Beta 4000 value, G8 dualglass media was developed using our proprietary Dynamic Filter Efficiency (DFE) test standard. Rest assured, our filter medias deliver cleanliness in the real world, whichever option you choose.

### High viscosity performance.

The custom-designed gerotor pump was specifically designed to allow for a higher viscosity range than competing units. The COF can pump up to a 2,200 cSt fluid, equivalent to an ISO 460 oil at room temperature. This increasing the range of applications that are suitable without adding bulky heater options.

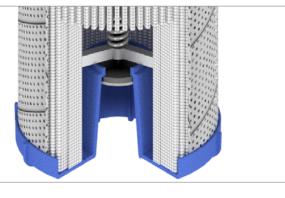

### Easy filter element servicing.

Only 1.5" of clearance is required for element servicing since the bowl and filter are removed as a single piece. The element snaps into the bowl and is automatically seated to the pump as the bowl is installed. A bowl drain comes standard as well as a hex nut for easy removal and installation. The required torque is listed on the bowl for easy reference during servicing.

### Reverse flow element with intergrated bypass.

The HP482 filter elements used in the COF utilize a reverse flow element with a bypass valve integrated into the closed end cap. The raised bypass design keeps dirt in the bottom end cap during bypass and element servicing. Every time an element is changed, a new bypass is installed eliminating bypass valve fatigue and leakage over time.

### Dedicated to reliability.

Don't let dirty oil get you down. Clean oil is essential to the long-term reliability of all equipment. At Hy-Pro we are dedicated to the removal of all forms of oil contamination from dirt to water and even varnish and sludge removal. Extend the life of your oils as well as high pressure, return, and pilot filter elements with an easy to service, compact off-line filter.

## Filter Sizing Guidelines

### Filter Sizing Guidelines and Viscosity Conversion

Effective filter sizing requires consideration of flow rate, viscosity (operating and cold start), fluid type and degree of filtration. When properly sized, bypass during cold start can be avoided/minimized and optimum element efficiency and life achieved. The filter assembly differential pressure values provided for sizing differ for each media code, and assume 32 cSt (150 SUS) viscosity and 0.86 fluid specific gravity. Use the following steps to calculate clean element assembly pressure drop.

Calculate ∆P coefficient for actual viscosity	Using Saybolt Universal Seconds (SUS)							
	∆P Coefficient	_	Actual Operating Viscosity <sup>1</sup> (SUS)	X	Actual Specific Gravity			
	AP Coefficient	_	150		0.86			
	Using Centistoke	s (cSt)	Actual Operating Viscosity <sup>1</sup> (cSt)		Actual Specific Gravity			
	ΔP Coefficient	=	32	- X _	0.86			
Calculate actual clean filter assembly ΔP at both operating and cold start viscosity	Actual Assembly Clean ∆P	=	ΔP Coefficient Flow Rate X (from calculation above)	X	Assembly ΔP Factor (from sizing table)			

Sizing recommendations	۰	To avoid or minimize bypass during cold start the actual assembly clean $\Delta P$ calculation should be repeated for start-up conditions if cold starts are frequent.
to optimize	۰	Actual assembly clean $\Delta P$ should not exceed 10% of bypass $\Delta P$ gauge/indicator set point at normal operating viscosity.
performance and permit future flexibility	0	If suitable assembly size is approaching the upper limit of the recommended flow rate at the desired degree of filtration consider increasing the assembly to the next larger size if a finer degree of filtration might be preferred in the future. This practice allows the future flexibility to enhance fluid cleanliness without compromising clean $\Delta P$ or filtre element life.
	•	Once a suitable filter assembly size is determined consider increasing the assembly to the next larger size to optimize filter element life and avoid bypass during cold start.

• When using water glycol or other specified synthetics we recommend increasing the filter assembly by 1~2 sizes.

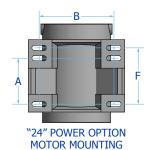

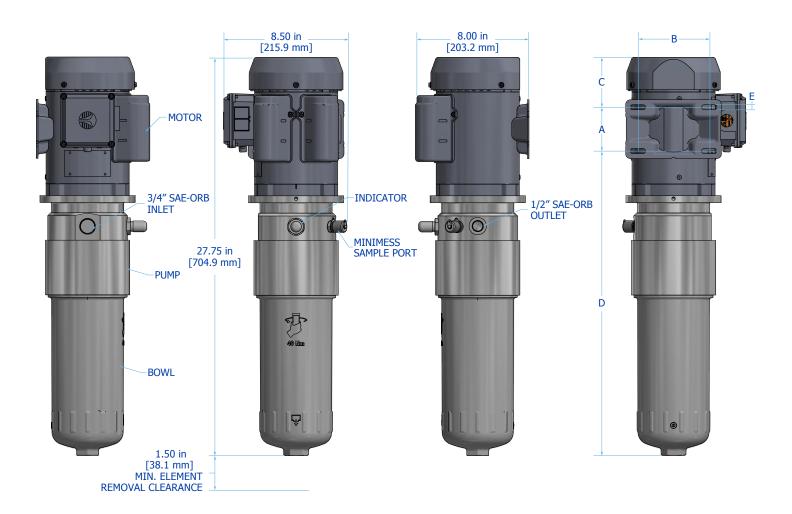

# COF Filter Sizing Guidelines

## Filtration starts with the filter.

**Lower ISO Codes: Lower Total Cost of Ownership** Hy-Pro filter elements deliver lower operating ISO Codes so you know your fluids are always clean, meaning lower total cost of ownership and reducing element consumption, downtime, repairs, and efficiency losses.

**DFE Rated Filter Elements** DFE is Hy-Pro's proprietary testing process which extends ISO 16889 Multi Pass testing to include real world, dynamic conditions and ensures that our filter elements excel in your most demanding hydraulic and lube applications.

**Upgrade Your Filtration** Keeping fluids clean results in big reliability gains and upgrading to Hy-Pro filter elements is the first step to clean oil and improved efficiency.

**Advanced Media Options** DFE glass media maintaining efficiency to  $\beta_{I_{cl}} > 4000$ , Dualglass + water removal media to remove free and emulsified water, stainless wire mesh for coarse filtration applications, and Dynafuzz stainless fiber media for EHC and aerospace applications.

**Delivery in days, not weeks** From a massive inventory of ready-toship filter elements to flexible manufacturing processes, Hy-Pro is equipped for incredibly fast response time to ensure you get your filter elements and protect your uptime.

**More than just filtration** Purchasing Hy-Pro filter elements means you not only get the best filters, you also get the unrivaled support, training, knowledge and expertise of the Hy-Pro team working shoulder-to-shoulder with you to eliminate fluid contamination.
