

MANN+HUMMEL Europiclon®
Two-stage air cleaner – Modular system

Europiclon®: The flexible allrounder

The Europiclon® from MANN+HUMMEL is characterised by its high dust capacity and low pressure drop.

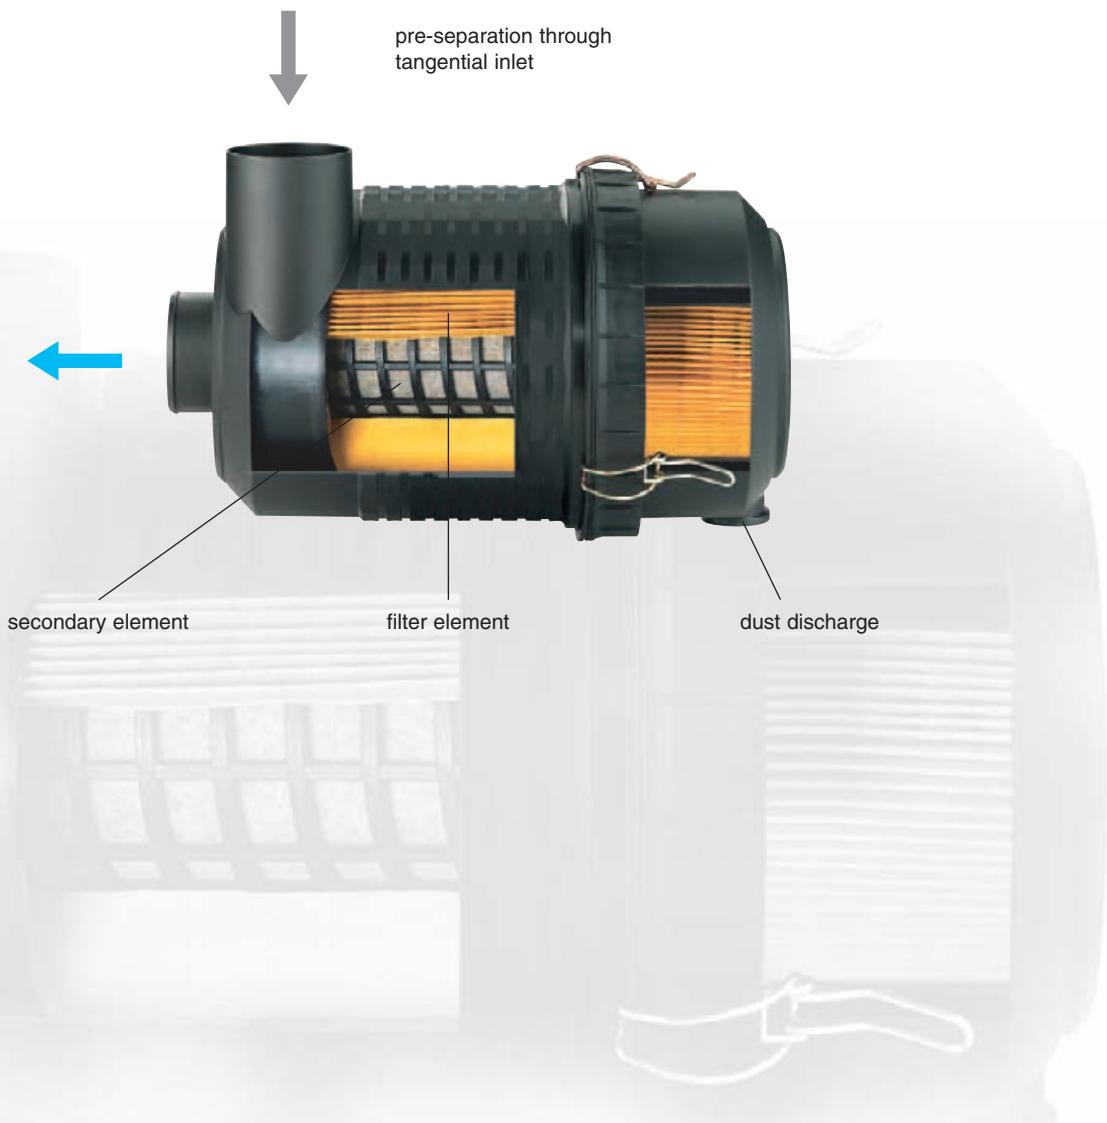

These characteristics have made the Europiclon® the tried and tested air cleaner for all machines and equipment used in conditions with

medium to heavy dust loads. These include construction and agricultural machines, mobile compressors and harvesting machines.

Advantages at a glance:

- long service life through integrated pre-separation
- highly economical through modular system
- extensive range of accessories
- corrosion free housing in impact resistant plastic
- easy element change without tools
- highest operational reliability through elements with proven radial seal
- metal-free filter elements are easily disposed of by incineration and therefore are environmentally friendly with inexpensive disposal
- easy adaptation to other equipment with a flexible bracket system
- patented filter elements

Sectional view

Filter elements

The Europiclon® elements are free of metal and therefore easily disposed of by incineration. This enables inexpensive and environmentally friendly disposal of the used elements.

Main element

- high dust capacity through special MANN+HUMMEL filter medium
- high reliability through radial seal on housing

- reliable pleat stability prevents pleats sticking together under demanding conditions

Secondary element

- MANN+HUMMEL synthetic fabric allows a high safety margin with low pressure drop
- secure fit in housing prevents unintentional removal of the secondary element

Housing

The housing of the Europiclon® is made of impact resistant polypropylene and is suitable for continuous use in the temperature range - 40 °C to +80 °C or for short periods up to +100 °C. The external polygon design of the housing is recognisable in the picture. The Europiclon® bracket, designed especially for this structure, can be turned in increments of 5° opposite to the housing.

Depending on the air cleaner size, the housing can be turned in the axial direction to six different locking positions. This offers the designer up to 432 different fitting possibilities for the air cleaner. In addition, the wire clamps which lock the air cleaner housing can be placed in special pockets on the cap to adapt to special installation conditions.

Europiclon® 50

The new Europiclon® 50 from MANN+HUMMEL extends the range of the successful Europiclon® line to engines and equipment with a power rating up to 20 kW. Along with the known advantages of the Europiclon® line which include reliability, long service life and its robust, corrosion-free housing, the new Europiclon® 50 has a number of additional features which offer important advantages for the designer and user.

Advantages at a glance:

- twelve-position clean air outlet with integrated connection for service indicator or switch
- clean air outlet available with straight pipe connection or with a 90° elbow
- new space-saving turn-lock fastener and easy filter element change without tools
- especially low pressure drop also in operation with fitted secondary element
- cost-effective

Filter elements

The new filter elements for the Europiclon® 50 offer high performance and are cost-effective. The radial seal used for the main element in connection with the special pleat stabilisation enables a high separation efficiency of more than 99.95% and a high dust capacity. A further advantage is the patented MANN+HUMMEL production technology where the seal and the element end plates are manufactured in one process step using special elastomers.

A plastic centre tube in the housing provides good support for the element without negatively influencing the withdrawal distance.

A secondary element protects the engine during a filter service or if the main element is damaged. It is an important component for comprehensive engine protection, which ensures the maximum service

life of your machine. The secondary element of the new Europiclon® 50 consists of a special synthetic fabric, a plastic centre tube and a radial seal in PUR foam. The filter surface area is approx. 45% larger than comparable products from the competition. This leads to minimal pressure drop with an increase in the service life of the filter.

Bracket

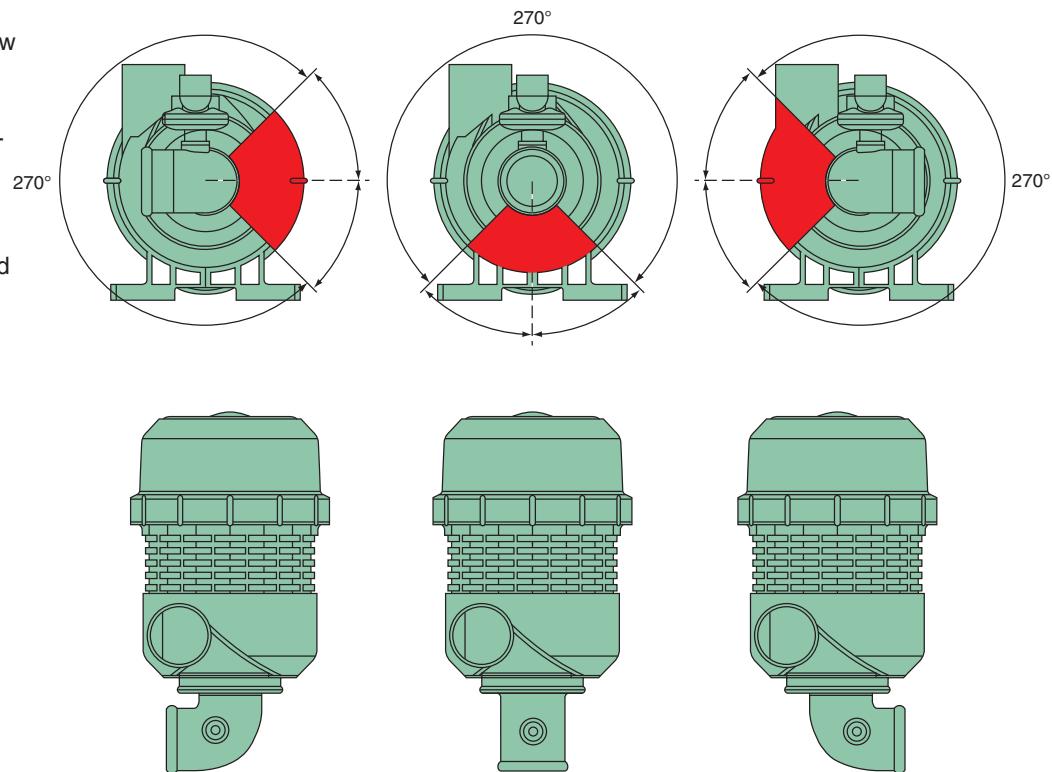

The Europiclon® 50 bracket offers flexibility during installation with 16 different available positions around its circumference and two possible locking positions in the axial direction.

The special polygon design is matched to the air cleaner housing and ensures that the air cleaner fits securely in the bracket.

Clean air outlet

On the clean air side the new Europiclon® 50 is equipped with a twelve-position clean air outlet. This port is available in a straight pipe version or with a 90° elbow. As the hanging installation position is not recommended for the service switch, MANN+HUMMEL offers the 90° elbow in two versions. Before placing your order, please check to see which orientation is more appropriate for your installation conditions.

Special versions

Europiclon® with dust collector (sizes 100 to 800)

The Europiclon® with a dust collector is especially suitable for applications where the dust discharge process should not dirty the immediate surroundings, e.g. as a requirement for production equipment. At the same time the service life advantages of a two-stage air cleaner are still valid. In these conditions the cover of the Europiclon® is fitted with a dust collector and sealed to

the surroundings. The functionality of the pre-separation remains exactly the same. The dust is separated reliably into the dust collector and is emptied manually from time to time. The timing of the service intervals depends on the application conditions.

Your MANN+HUMMEL partner will be happy to answer any questions on this version.
